
PATHWAY

LOW-COST AUDIO BIBLE

ABOUT

The MegaVoice Pathway is a secure, lower-cost solution that assists Partners to share their message to more people.

When a message needs to be shared broadly, the Pathway is a secure solution. Focusing on keeping costs low, instead of rugged durability, MegaVoice developed the Pathway for organizations that needed a "disposable", yet secure solution to share their message. The Pathway is the perfect solution to make sure audio content like health and medical information, safety and disaster response guidance, or any other critical message is easily accessible. With intuitive and tactile navigation controls, the Pathway player helps bring critical messages to individuals and small groups so they can easily engage with it.

The Pathway can be easily customized to fit the specific target, customizing: color, memory size rechargeable or standard AA battery and, of course, the level of security.

For more information about the Pathway, please visit megavoice.com
