

Getting Started

User Guide for your MegaVoice Audio Player

Now that you have received a MegaVoice audio player, here's how to get started if you wish to load your own audio messages on it.

Step 1

You will need Adobe Reader to view the recommended documents for your MegaVoice audio player. If you do not have Reader installed on your PC/Mac, please [click here](#) to download it.

Step 2

Download a free copy of MegaVoice's [Smart Loading System](#) (SLS) software program. SLS is required to load audio content to MegaVoice players. Make sure to choose the version closest to the PC/Mac computer that you have.

And while you are there, you can sign up to receive email updates regarding newer versions of SLS.

Step 3

For details on how to structure your message, download the correct User Guide from our web site. Simply click on the MegaVoice audio player that you have below:

Envoy S

Envoy S Dual

Herald

Story Teller

Step 4

Download a document we have been working on entitled "[Creating your own audio message to microSD](#)". Although the document is still under construction, it contains valuable tips and advice to assist you in recording your own audio message as well as preparing a *microSD* card with it for distribution.
