

HERALD *Battery-powered digital audio player with microSD™ card*

MegaVoice introduces its smallest digital audio player, the 1.4* ounce Herald. The Herald is lightweight and cost effective - ideal for teaching and training. Its intuitive, raised-button keypad makes navigating hundreds of hours of audio and Scripture content quick and easy - even for the elderly or blind.

The Herald comes with fixed internal flash memory and a *microSD™* card slot, making it simple for your ministry team to update content and switch between different *microSD™* cards. Load over 500 hours of tamperproof audio content including: the Bible, New Testament, sermons, discipleship training, music, educational or humanitarian messages, and load your ministry's audio content onto the *microSD™* card as needed.

The MegaVoice Herald is designed to be less conspicuous and is powered by 2 AA batteries, making it ideal for creative access applications. The Herald has a common earbud jack for personal listening or can be plugged into the MegaVoice Solar Case Speaker so an entire congregation can hear the Message.

About the Herald
